

## Running instructions

To run the application the user should enter java -jar adss2020\_v01.jar in the terminal.

The system already has two Admins with id's 123 and 580083434.

The user can see all the other employees by using the system.

All instructions from the system are self-explanatory.

For example, the starting screen:

```
to proceed, provide your ID number or -1 to cancel
123
Welcome, Admin2
To manage employees press 1
To manage shifts press 2
To manage qualifications press 3
To logout, press 4
```

Here the user can choose a menu to enter by writing a number and pressing *enter*.

Every *date* that the user can enter should follow this format: yyyy-MM-dd (the system will add 2022-11-12T06:00:00)

For example: 2022-11-12

Or if the user wants to add the *specific time* yyyy-MM-ddThh:mm:ss

For example: 2022-11-12T21:12:13

While adding a worker to the shift the user can give him a number of roles.

After adding every role he wants the user can write -1 to exit the *adding role* menu.

Every user can be deleted, so that your organization will be able to add it's own workers.
